FabFlow

Fictional business profile | Rapid prototyping, made approachable

Mission & identity

FabFlow is a fictional rapid-prototyping studio for students, makers and small teams. We make physical prototyping accessible, transparent and educational, so beginners can confidently take their first step from a digital design to a physical object.

Our services

FDM 3D printing: PLA and PETG; submit STL files. **Laser cutting:** plywood or acrylic up to 3 mm; submit SVG or DXF. **CAD design review:** practical feedback on a draft design. **Introductory consultation:** a 30-minute conversation about prototyping options. The chatbot cannot accept file uploads, take payment, or confirm an order.

Rates & turnaround

3D prints start at **$12 per job + $0.15 per gram** of printed material. Laser cutting starts at **$20 per job** (final quote depends on material and machine time). CAD design review starts at **$35 per design**. A 30-minute consultation costs **$25**. All prices are starting points or estimates, not binding quotes. Typical production occurs **3-5 business days after staff approval**; no exact date or rush service is guaranteed.

Our team

Maya Chen - Founder & Mechanical Engineer; responsible for engineering oversight and studio operations.
Omar Haddad - Prototyping Lead; checks printing and cutting feasibility.
Lina Patel - Customer Success Specialist; coordinates inquiries, quotes, and follow-up.

Why choose FabFlow?

Unlike a simple upload-and-print storefront, FabFlow offers beginner-friendly guidance, clear starting prices, and a human review before confirming a project. We help customers identify the right fabrication process without promising capabilities we do not offer.

Customer journey

1. Ask the virtual assistant questions about services and policies.
2. Describe a project and provide your name, email, and project notes for follow-up.
3. A staff member evaluates feasibility, pricing and scheduling.
4. Staff confirm the quote and next steps. An inquiry is not an order or booking.

Policies & limitations

Hours: Monday-Friday, 9:00 a.m.-6:00 p.m. | Studio: 18 Workshop Lane, Cedar Harbor (fictional city). Contact: hello@fabflow.example. We do not offer metal 3D printing, resin printing, CNC machining, engineering certification, or guaranteed rush jobs. We do not fabricate weapons. The chatbot should log unanswered questions rather than speculate.

Demo note

This is a fully fictional business created for EECE 503P/798S. Addresses, employees, prices and policies are invented for a classroom demonstration; the .example email is not an active inbox.
